COVER LETTER

Application for a software engineering role

Dear Hiring Manager,

I am writing to express my interest in a software engineering role within your organisation. I am a Senior Software Engineer at Omobio (Pvt) Ltd with over three years of experience building full stack applications, real-time reporting and data pipelines, and enterprise telecom platforms, and I would welcome the chance to bring that experience to your team.

Since joining Omobio as a trainee in 2023, I have grown into a lead role on the Banglalink SMSC platform, which runs across 16 servers at up to 40,000 TPS. Recent work I am proud of includes:

- → **Reporting & billing engine** – a ClickHouse data model with cascading materialized views and a reusable Python report engine serving 70 reports, with Docker, automated migrations and SonarQube.
- → **AI/ML campaign detection** – a real-time SMS firewall pipeline using LightGBM, HDBSCAN and Sentence Transformers, deployed through Docker and Jenkins CI/CD.
- → **Real-time analytics** – a Vector → ClickHouse → Apache Superset pipeline with KPI dashboards, tuned to meet a 4-minute write SLA under load.

Across my career I have delivered for Banglalink, Mobitel, Airtel, Ncell, Hutch and Hemas Hospital, working with Python, PHP, JavaScript, ReactJS, Next.js, SvelteKit, Node.js and Ext JS, alongside ClickHouse, MariaDB, MySQL and MongoDB. I enjoy owning a feature end to end, from architecture and code review to deployment, and I believe that in data-heavy systems, a good design beats clever code.

I would be glad to discuss how I can contribute to your goals. I have attached my CV, and you can see all my projects at ushan1996.github.io. Thank you for your time and consideration.

Yours sincerely,

Ushan Jayamanne
